

Simply Take Control

Quickcoms is a highly secure and configurable SAAS platform supporting batch or interactive omni-channel communications that scales to meet demand. With its modern and intuitive interface, Quickcoms puts business users in total control of their content and delivery in a no code environment.

Quickcoms is built from the ground up with security, compliance and SLA management at the core. It is scalable, web-based, cloud agnostic, easy-to-use and extendable.

Version Management

Quickcoms allows users to create unlimited document versions from master template or other versions and editing with an easy-to-use online editor. Generate real-time proofs with a built-in composition engine.

Business Rules Engine

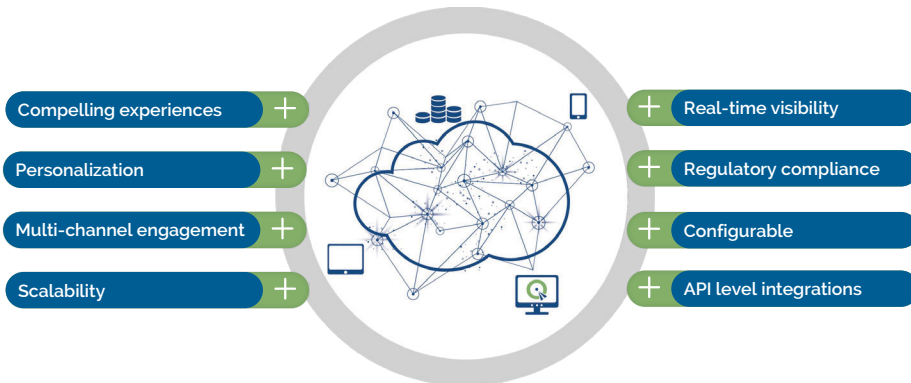

Quickcoms comes with a highly sophisticated business rules management engine. Users can configure simple, complex or nested business rules globally once and use across versions and workflows.

Customer Journeys

Quickcoms' visual workflow tool empowers users to design, manage, and track customer journeys with ease. By leveraging Quickcoms, Users can create seamless and personalized experiences, optimize customer interactions, and ultimately drive customer satisfaction and loyalty.

Approvals

Quickcoms allows Users to configure approval processes that can accommodate single-level or multi-level approval for proofing or production communications from multiple stakeholders.

Visual Workflows

Authorized users utilize the web-based Visual designer tool to set up process workflows that are easy to configure and execute. The workflows can be easily validated with sample data before releasing them to production. Both individual and batch workflows can be setup using the designer. The system can generate a complete visual of record-level execution path.

Dashboard & Reporting

Quickcoms gives you timely, accurate and detailed reporting. It has a powerful and intuitive dashboard that provides a birds-eye view of system processes. Production Supervisors can easily schedule and track jobs. Support for reprints and file batching is inherent to the system. Authorized users can search and retrieve any composed PDF documents for Production.

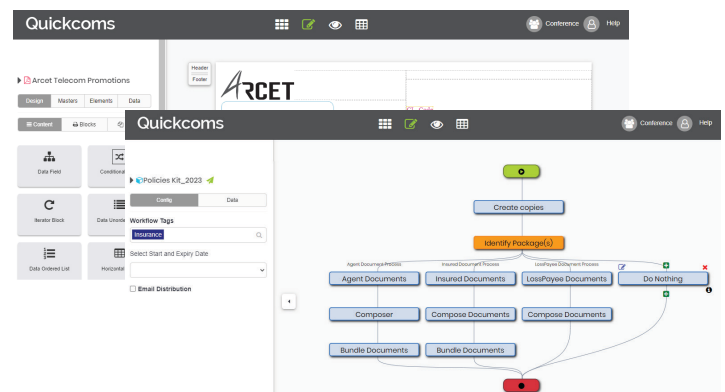

Professional Services

Our talented professional services team can either extend Quickcoms capabilities or integrate it with your existing legacy or third-party systems. We have a dedicated creative team for designing and setting up default templates. Our knowledgeable support team can quickly resolve any system issues. Our certified project managers closely monitor the entire engagement and always deliver on time and within budget. They can provide detailed status reports on a regular basis and initiate corrective measures as needed.

Compliance & Auditing

Quickcoms lets you track service level agreements (SLA) and can flag for non-conformity. Compliance Officers can obtain detailed audit trail of each and every item change including document versions, business rules and packages.

Technology

Quickcoms is built using open source for technologies that support cloud-first architecture. The built-in proprietary composition engine is capable of generating extremely high-volume print output. The technology can scale both horizontally and vertically.

Quickcoms

We provide software solutions that deliver powerful personalized marketing and customer communication messages utilizing cross-media delivery channels such as print, email, SMS, WhatsApp, Purls and video.

We are a global company linked by shared goals, a solid methodology and relentless focus on customer. We are nimble enough to provide one-of-a-kind solution that matches our customer's unique needs.
